# INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

PCT/FI2003/000724

## Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non obvious), or to be industrially applicable have not been examined in respect of:

☐ the entire international application

☒ claims Nos. 23-25

because:

☒ the said international application, or the said claims Nos. 23-25  
relate to the following subject matter which does not require an international preliminary examination (*specify*):

See PCT Rule 67.1.(iv): Methods for treatment of the human or animal body by surgery or therapy, as well as diagnostic methods.

☐ the description, claims or drawings (*indicate particular elements below*) or said claims Nos. \_\_\_\_\_  
are so unclear that no meaningful opinion could be formed (*specify*):

☐ the claims, or said claims Nos. \_\_\_\_\_ are so inadequately supported  
by the description that no meaningful opinion could be formed.

☐ no international search report has been established for said claims Nos. \_\_\_\_\_

☐ the nucleotide and/or amino acid sequence listing does not comply with the standard provided for in Annex C of the Administrative Instructions in that:

the written form

☐ has not been furnished

☐ does not comply with the standard

the computer readable form

☐ has not been furnished

☐ does not comply with the standard

☐ the tables related to the nucleotide and/or amino acid sequence listing, if in computer readable form only, do not comply with the technical requirements provided for in the Annex C-bis of the Administrative Instructions.

☐ See Supplemental Box for further details.

## 2. Citations and explanations (Rule 70.7)

The claims relate to tumour targeting units and their use.

The following documents were found:

A US 5622699

B WO 0244215

Document A relates to a method of identifying a molecule that homes specifically to one or a few selected organs, like the brain and the kidney. The molecules can be used to direct a moiety to the selected organ. They can be linked to labels and pharmaceuticals to use in the treatment of cancer (see columns 12-13). However, the organ specific peptides have not been shown to be tumour targeting.

Document B discloses a binding molecule comprising one or more polypeptides which form a binding site capable of binding a target molecule and a Fc effector peptide. Claim 10 shows peptides that are only one amino acid longer than the claimed peptides in the present application. The binding molecules can be used to target and deliver additional drugs, such as cytotoxic drugs (see p. 31, lines 9-30). However, these peptides have not the same function as tumour targeting peptides as the claimed peptides.

Thus, the documents show the general state of the art.

Claims 1-22 are considered to fulfil the requirements of novelty, inventive step and industrial applicability.
